

LPI Double-T Universal Harness

WARNING! YOU MUST FULLY READ, UNDERSTAND AND FOLLOW THESE WARNINGS AND INSTRUCTIONS (WRITTEN AND VIDEO) BEFORE USING YOUR LPI DOUBLE-T UNIVERSAL HARNESS. FAILURE TO FOLLOW THESE INSTRUCTIONS MAY CAUSE SERIOUS INJURY OR DEATH.

WARNINGS, INSTRUCTIONS FOR USE, MAINTENANCE AND WARRANTY

Warnings:

- The LPI Double-T Universal Harness is rated for and has a weight capacity of 300-lbs. Do not use this product if you and your clothing exceed 300-lbs or serious injury or death may result.
- You must fully read, understand and follow these warnings and instructions (written and video) before using your LPI Double-T Universal Full Body Harness. Failure to follow these instructions may cause serious injury or death.
- Never exceed the capacity rating of a harness (fall arrest system) or any other device.
- Inspect your harness (FAS) and or any other device before each use.
- Practice the use and adjustment of this harness (FAS) and any other device at ground level before using.
- Have a personal recovery plan in place and practice the plan in the presence of a responsible adult before leaving ground level.
- Hunt from the ground when you do not have a recovery plan.
- Inform someone of the hunting location, where tree stand will be located and the expected duration of the hunt.
- The length of the tether/lanyard strap must be minimized at all time. It should be adjusted so that it is above the head with no slack (snug) in the sitting position and you should have the minimum amount of slack possible when climbing.

- Practice the use of a full body harness at ground level in the presence of responsible adult to experience the feeling of hanging suspended before using in a hunting environment.
- Never allow the tether strap to get under your chin or around your neck.
- Failure to follow harness instructions could result in not being able to return to the stand and being suspended in a harness after a fall.** If the hunting location is unknown by anyone and communication efforts are unsuccessful, you must have a personal plan for recovery/escape because prolonged suspension in a harness can be fatal. It is important to exercise the legs by pushing against the tree or doing other forms of continuous leg exercises to avoid blood pooling while being suspended. Hunters with varying degrees of physical fitness may require different plans to recover/escape the effects of prolonged suspension. Have a personal plan and practice it in the presence of a responsible adult before leaving the ground. No one escape/rescue plan will work for every hunter on every tree in every circumstance. Only you can determine the best recovery/escape plan for your hunting situation and you must have a recovery/escape plan for your situation before leaving the ground.
- A suspension relief device must be on your person and readily accessible while using a harness. These devices allow the user to relieve the load on the lower extremities if suspended in a harness and help maintain circulation in the legs, mitigate suspension trauma (blood pooling) or allow descent to the ground. Be sure to follow the manufacturers' directions on the safe use of any suspension relief device.
- Several optional products/systems are available that offer self-recovery or self extraction from a fall when suspended in a harness. Some systems automatically descend the user while others allow user control. One of those products/systems can be considered for use as an additional safety precaution against prolonged suspension and suspension trauma. Be sure to follow the manufacturers' directions on the safe use of these products/systems.**
- Hunt from the ground when self-recovery/escape ability is absent.
- There is time to make a correct decision on what action to take if a fall occurs while wearing a full body harness. It is important to remember "DO NOT PANIC." Remain calm and implement your practiced rescue, relief and recovery plan.
- In the event of a fall either use a self recovery device or the suspension relief device (SRD) which this harness is equipped with.
- Do not panic if you fall.
- Discard and or remove this harness and tree strap from use of service after five years from

the manufacturing date or after the first fall which ever occurs first. Failure to discard and/or remove your harness and/or tree strap from service after five years from the manufacturing date or after arresting a fall, may cause serious injury or death.

Instructions for Use:

1. Place the harness over your head onto your shoulders. See Photo 1.

Photo 1

2. The tether will be in the back and the SRD will hang in the front. (Hint: the SRD is the black webbing with the rubber band). See Photo 2.

Photo 2

3. Adjust the slide bar on the shoulders for your body length. See Photo 3.

Photo 3

4. Insert the front leg

straps (with the female end of the quick release buckle) through the back leg strap loop. See Photo 4.

Photo 4

5. Wrap the front leg strap around the outside of the leg up through the inside of your leg. See Photo 5.

Photo 5

6. Connect the quick release buckles for each leg by inserting male end into female end you will hear it click it if is engaged. If you do not hear a click retry until you hear a loud click or do not use.
7. Adjust the slide bar on each side of your back leg straps so that the slide bar is even with the top of your hip. See Photo 6.

Photo 6

- Adjust the webbing on the quick release buckle. See Photo 7.

Photo 7

- Velcro the excess webbing for future use. See Photo 8.

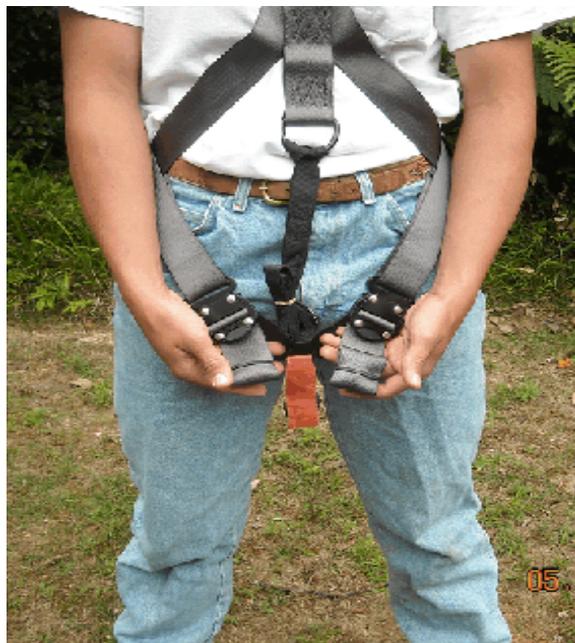

Photo 8

Instructions for Tree Strap:

1. Thread the tree strap through the tether loop on your harness.
2. Wrap the tree strap around the tree and feed the strap up through the backside of the floating buckle and back over the floating buckle and out the front of the floating buckle. See Photo 11 and 12.

Photo 11

Photo 12

3. The tether needs to be at least 8" from the floating buckle.

Instructions for Suspension Relief Device (SRD):

In the event of arresting a fall the suspension relief device (SRD) will allow the user to stand up to allow some relief of the persons weight on the lower extremities. This is to help maintain blood circulation and aid in the prevention of suspension trauma known as blood pooling. The SRD is a device made of one inch black webbing attached to the front of the harness. This device is bundled and bound with a rubber band or velcro strap. To use the SRD:

1. Release it by removing the rubber band or strap and unbundle it. See Photo 13 and 14.

Photo 13

Photo 14

2. The SRD has a three bar slide for adjustment. To adjust the device remove the three bar slide up or down the strap to lengthen or shorten it as needed. See Photo 15.

Photo 15

3. The proper adjustment is when the SRD is about half way between the knee and the foot of the user. The length should allow the user to insert his/her foot into the loop and stand up on the SRD comfortably and adjust as needed. See photo 16.

Photo 16

4. Set this adjustment and any other adjustment to your harness on the ground before you use this harness.

Warranty:

If you are not 100% satisfied with your order when it arrives, we will refund your money if the product is returned in its original container, with original packing and proof of purchase to: Hunter Rescue™, 600 Century Park South, Suite 100, Birmingham, AL 35226. Products returned after thirty (30) days from purchase are not eligible for return credit. You will be responsible for the cost associated with shipping the product back to us (we do not accept C.O.D.). If, for any reason, we feel that the product was not returned in the same condition as when it was purchased, we reserve the right to withhold the amount needed to bring the product back to its original condition if we determine that the product has been abused.

Limited Warranty for Full Body Harness and Tree Strap:

Lewis Products, Inc. warrants to the original retail purchaser that the full body harness and tree strap are free from defects in materials and manufacture for sixty (60) months from the date of purchase or one fall, whichever ever occurs first. Lewis Products, Inc. will repair or replace any part found defective if the unit claimed to be defective is returned to Lewis Products, Inc., (postage prepaid) within the warranty period along with proof of purchase. Please let us know the nature of the problem and where to send the replaced item.

What is not covered by Limited Warranties:

We do not warrant our products for defects caused by modifications or alterations, improper use, improper maintenance, misuse, or if the products are used for a purpose for which they were not designed or intended. Fading of nylon webbing and/or rope is not covered under this warranty. This Warranty gives you specific rights, and you may also have other rights, which vary from state to state.

Warranty Disclaimer:

These warranties are given in lieu of any and all implied warranties, including but not limited to: Implied Warranties of Merchantability, and Fitness for a Particular Purpose. In no event shall we be liable for any special, indirect, punitive and/or consequential damages caused as a result of the use of our products. This Warranty does not include any manufacturer responsibility for any incidental or consequential damages resulting from the use of our products. Some states do not allow the exclusion of incidental or consequential damages, so this exclusion may not apply to you. We are not liable for any injury, or mishaps arising from the use of our product. The user of our product assumes all risks and damages that can occur when falling out of any elevated tree stand or platform and waives any and all claims against us, our subcontractors and our distributors for any and all injuries (including death) that may result from the use of our products.
